PUBLIC-FACING REVIEW

Current screenshots, customer-visible copy, and clearer rewrite proposals

This file captures the pages a public visitor can reach on the current site: the four marketing pages plus the public login and registration flows. Screenshots are full-page desktop captures from the live local app. The copy lists are extracted from the rendered HTML so you can review what a customer actually reads today, then compare it with a simpler client-facing rewrite.

Main issue:
The site often describes the system instead of the client problem.

Rewrite goal:
Replace internal jargon with outcomes, audience clarity, and concrete deliverables.

Best next move:
Use these proposed sections as a draft structure before rewriting page-by-page in the app.

HOME

/

The homepage should immediately tell a serious service business who ash-tra helps, what improves, why it matters commercially, and what to do next.

PREMIUM WEBSITE TRANSFORMATION

Design, SEO, accessibility, and client journey together

Premium websites and client portals for service businesses that need a stronger digital presence.

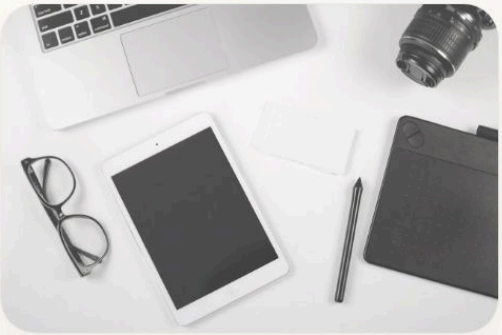
ash-tra redesigns websites and client portals for serious service businesses that need clearer messaging, stronger SEO foundations, better accessibility, multilingual readiness, and a smoother client journey from first visit to final handoff.

Start a Project → | See Services

CLARITY
Explain the offer faster and reduce confusion for the right buyer.

TRUST
Make the business look as capable, current, and premium as it really is.

JOURNEY
Carry the same quality through enquiry, delivery, and handoff.



HOMEPAGE IMAGE

A premium website should feel calm, current, and commercially serious from the first screen.

Homepage image supporting the premium website transformation positioning.

Photo by Veex via Pixabay.

- Clearer messaging and first-impression trust
- Accessibility-minded design and cleaner mobile usability
- Multilingual readiness for businesses serving more than one audience
- A smoother path from first visit to final handoff

WHAT IMPROVES

The result should feel like a full digital upgrade to the business, not just a

- Easier to understand
- Easier to trust
- Easier to find in search
- Easier to navigate

nicer homepage.

Easier to buy from

Easier to manage after the sale

SERVICES

Three areas we improve together so the whole site works harder for the business.

Messaging and positioning

Clarify what the business does, who it is for, and why the right buyer should trust it.

SEO foundations

Build page structure, metadata, schema, headings, internal linking, and search intent into the site from the start.

Client portal and delivery flow

Keep project updates, files, payment, and handoff organized in a client portal that feels as polished as the public site.

ACCESSIBILITY AND MULTILINGUAL READINESS

A modern premium website should be easier to use for more people, across more contexts.

That means sensible structure, readable contrast, clear forms, strong mobile usability, and language systems that feel deliberate rather than bolted on. Accessibility and multilingual clarity are part of website quality, not extras.

See How It Works

View Examples

PROCESS IMAGE

Good design, technical quality, and client usability should reinforce one another.

Used on the process page to support the audit-to-launch narrative.

Photo by StockSnap via Pixabay.

CLIENT PORTAL

The premium experience should continue after the client signs.

The client portal is where project updates, files, payment, preview feedback, and handoff stay organized. That continuity matters because a premium public site should not lead into a confusing internal experience.

- Project updates stay visible instead of disappearing into email threads.
- Files, payment status, preview feedback, and delivery notes live in one place.
- The premium promise continues after sign-up instead of

CLIENT PORTAL IMAGE

The post-sale experience should feel ordered, reassuring, and easy to follow.

Used on signed-out account pages to connect the brand to the client workspace experience.

HERO

Websites that explain your value clearly and help the right clients say yes.

We redesign websites and client portals for service businesses that need clearer messaging, stronger SEO foundations, better accessibility, multilingual readiness, and a smoother client experience from first click to final handoff.

- Clearer positioning for premium buyers
- SEO structure built into the pages from day one

- Accessibility, multilingual readiness, and a client portal that feel designed in from the start

Suggested CTAs: Start a project | See services

WHY IT WORKS

What changes when the site is doing its job

Visitors should understand who you help, what makes your offer different, and what to do next within a few seconds. The redesign should make that path obvious.

- The message becomes easier to understand
- Trust signals appear earlier in the page
- The next step feels clear instead of forced

CORE SERVICES

Three areas we improve together

We treat messaging, search visibility, accessibility, multilingual usability, and client delivery as one customer journey instead of separate clean-up tasks.

- Messaging and page structure
- Website SEO and content foundations
- Client portal, onboarding, and delivery flow

CLIENT EXPERIENCE

The experience should stay premium after the proposal is signed.

A strong website should lead into a strong delivery experience. That means intake, files, status updates, and handoff all feel organized and on-brand.

- One place for project details and files
- Clear project status and payment visibility
- A smoother handoff for both client and team

CLOSING CTA

If the work is premium, the website and client journey should feel premium too.

Use the site to make the business easier to understand, easier to trust, and easier to buy from.

Suggested CTAs: Start a project

SERVICES

/services

The services page should explain what improves for the client's business in plain language rather than describing internal architecture or process language.

SERVICES

What improves for the business

Services for premium service businesses whose digital presence no longer reflects the quality of their work.

ash-tra improves the message, the structure, the search foundations, and the client experience around the site so the business feels easier to understand, easier to trust, and easier to buy from.

Messaging and positioning

Clarify what the business does, who it is for, and why the right buyer should trust it.

- Homepage and service-page hierarchy
- Offer framing and clearer calls to action
- Proof placement that supports trust instead of hiding it

Website SEO foundations

Build SEO into the page structure from the start so the site is easier for search engines and users to understand.

- Metadata, schema, heading structure, and internal linking
- Search-aware page intent and semantic content structure
- Performance, accessibility, and crawl-friendly foundations

Client portal and delivery flow

Make the post-sale experience feel organized, premium, and easy to follow for both client and team.

- Project updates, files, payment, and handoff in one portal
- Clearer onboarding and lower-friction communication
- A client journey that supports the value of the work after sign-up

WHAT CLIENTS RECEIVE

The outcome is a stronger website system, not just a cosmetic refresh.

- A clearer offer and stronger first impression
- A more modern, premium visual direction
- Better search foundations and content structure
- Accessibility-minded design choices from the start
- Multilingual readiness where the business needs it

SERVICES IMAGE

The work should feel commercially useful, visually refined, and technically credible.

Used on the services page to reinforce strategic planning and delivery rigor.

Photo by DiggityMarketing via Pixabay.

A smoother client journey after the sale

WHY IT MATTERS

A stronger site should improve how the business is perceived before and after the sale.

The offer becomes easier to understand quickly.

Trust cues move closer to the promise.

SEO and accessibility are built into the work, not added late.

The client portal reinforces the premium feel of the service.

NEXT STEP

If the current site undersells the business, we improve the message, the structure, and the client journey together.

HERO

Services for businesses that need a clearer website and a smoother client journey.

We help service brands improve how they present their offer, how they show up in search, and how clients move through the project after the sale.

SERVICE 1

Messaging and positioning

Clarify what you do, who it is for, and why a buyer should trust you. This usually starts with the homepage, offer pages, proof blocks, and calls to action.

- Homepage and page hierarchy
- Offer framing and service structure
- Testimonials, proof, and calls to action

SERVICE 2

Website SEO foundations

SEO should be built into the page structure while the site is being shaped, with accessibility and multilingual readiness handled as part of modern website quality rather than rushed add-ons.

- Metadata and schema
- Heading structure and internal linking
- Search-aware copy, page intent, accessibility, and multilingual planning

SERVICE 3

Client portal and delivery flow

The portal should help clients feel confident after they sign. It should make intake, file sharing, quotes, and project status easy to follow.

- Project intake and reference collection
- Quote, payment, and progress visibility
- Organized asset delivery and handoff

DELIVERABLES

What clients actually get

A stronger website, clearer page structure, a better SEO base, more usable page design, and a client workspace that supports the service instead of weakening it.

- Core public-facing pages
- Shared design system and content direction
- Client workspace screens and delivery flow

CLOSING CTA

If the current site undersells the work, we fix the message, the structure, and the client flow together.

That creates a site that is easier to trust and easier to use.

Suggested CTAs: Start a project

HOW IT WORKS

/process

The process page should describe the visible client journey in a simple sequence: review, clarify, build, and connect the work to the client experience.

HOW IT WORKS

A visible process from review to handoff

A clear process from current-site review to a stronger website and client portal experience.

The process should feel simple, visible, and commercially grounded. Clients should be able to understand what happens next and why each step matters to the final result.

STEP 01

Review the current site and business context

We look at the current website, the offer, the audience, the trust gaps, and the pages that matter most so the work starts from the real business problem.

STEP 02

Clarify the message and page structure

We reshape the page hierarchy so visitors can understand who the business helps, why it matters, and what to do next without decoding internal language.

STEP 03

Build the SEO-ready page system

We design the site with cleaner headings, metadata, schema, internal linking, accessibility, and multilingual readiness built into the structure from the start.

STEP 04

Connect it to the client delivery experience

We make the client portal feel clear and premium too, with visible progress, files, payment details, preview feedback, and organized handoff.

PROCESS PRINCIPLES

The work should feel calm, clear, and easy to trust while it is moving.

- Keep the process clear enough for the client to picture from the first conversation.
- Build the message, design, SEO, accessibility, and client journey as one coherent transformation.
- Make the public pages and the client portal feel like

PROCESS IMAGE

The visible process should make the transformation feel organized rather than abstract.

Used on the process page to support the audit-to-launch narrative.

Photo by StockSnap via Pixabay.

parts of the same premium experience.

OUTCOME

The client should feel guided, informed, and well handled from the first brief to the final delivery.

Clearer decisions around what changes and why

Cleaner SEO, accessibility, and multilingual foundations

A lower-friction journey from enquiry to handoff

A client portal that reinforces the quality of the public site

START

If the current site already has trust or traffic, a clearer structure can create value quickly.

HERO

A clear process from audit to launch.

We start with the current site, identify what is helping or hurting trust, then rebuild the public pages and client flow around a clearer message and cleaner structure.

STEP 1

Review the current site and business context

We look at the current website, the offer, the proof, and the friction points that are making the business harder to understand or harder to buy from.

STEP 2

Clarify the message and page structure

We simplify the story so the audience, value, and next step are clear. This shapes the homepage, service pages, proof sections, and calls to action.

STEP 3

Build the SEO-ready page system

We create pages that are easier to scan for people and easier to understand for search engines, with cleaner metadata, headings, and content structure.

STEP 4

Connect it to the client delivery experience

The signed-in experience should carry the same quality as the public site, with clearer status, files, and handoff steps.

PRINCIPLES

How we keep the work practical

The process should stay simple, visible, and useful under real delivery pressure. Clients should know what is happening. Teams should know what comes next.

- Clear page structure
- Search-ready templates

- Organized delivery and handoff

CLOSING CTA

A better process produces a better website and a better client experience.

If the current site already has some trust or traffic, improving the structure can create value quickly.

Suggested CTAs: Start a project

EXAMPLES

/showcase/rotata-es

The example page should explain what is already strong, what is holding the site back, what ash-tra would improve, and why the change is commercial rather than cosmetic.

EXAMPLE

Strategic proof, not internal commentary

Rotata is a strong example of a good business whose website could communicate the value more clearly.

The opportunity here is not to make the site merely look different. It is to help visitors understand the offer faster, trust the business sooner, and move through the site more confidently.

- There is real service depth and enough content to support a strong consultancy website.
- The business already has credibility that can be used more effectively on the page.
- The site gives us clear material to restructure around trust, proof, and conversion.

EXAMPLE IMAGE

A strong business deserves a website that presents the offer with more clarity and control.

Used on the showcase page to signal delivery quality and stakeholder confidence.

Photo by Tama66 via Pixabay.

WHAT IS HOLDING THE SITE BACK

- The message at the top of the site could be easier to understand quickly.
- Proof and authority signals should appear closer to the offer.
- The page hierarchy needs to separate insight content from conversion paths more clearly.

Clarify the first-screen positioning so visitors know what the business does and who it helps.

Strengthen trust by moving proof, outcomes, and partner cues higher up the page.

Improve page structure, SEO signals, accessibility, and the mobile reading experience.

Guide visitors into a clearer next step with more confident calls to action.

WHY THIS MATTERS

Better structure, cleaner proof

HERO

Rotata is a good example of a strong business with a website that could communicate more clearly.

The site already has useful depth and credibility. The opportunity is to make the message easier to understand, bring proof closer to the offer, and guide visitors more clearly toward the next step.

WHAT WORKS

What is already working

There is enough real content, authority, and service depth here to support a strong consultancy website. The issue is not a lack of material. The issue is how it is organized and framed.

- Useful service depth
- Real content and proof
- A credible consultancy offer

WHAT WE WOULD IMPROVE

What we would change

We would tighten the top-of-page message, simplify the content structure, strengthen proof placement, and make the calls to action feel more intentional.

- Clearer first-screen positioning
- Stronger proof framing
- Cleaner content hierarchy
- More confident closing CTA

WHY IT MATTERS

This is a commercial improvement, not just a visual one.

When visitors understand the offer faster and trust it sooner, the site becomes more useful to the business. Better structure supports better sales conversations.

CLOSING CTA

Use the showcase as proof of the thinking, then run the live project through the client workspace.

The public example should show the strategy clearly. The private workspace should make the project easy to run.

Suggested CTAs: Start a project | View client login

CLIENT LOGIN

Need access?

Create an account to start a new project or contact the team if you expected access already.

Suggested CTAs: Create account

START A PROJECT

/register

The register page should feel like the beginning of a project, with clear language around the brief, references, and the client portal rather than internal product terms.

START A PROJECT

Keep the brief and delivery organized from the start

Create your account to submit the brief, share references, and keep the project organized from the start.

The account gives you access to the intake, the preview, the files, and the client portal so the whole project can move forward in one clear place.

Tell us about the current site and goals

Share the business context, what is not working, and what the new site needs to improve.

Upload references and brand material

Add logos, screenshots, PDFs, inspiration, and notes that should shape the direction.

Track the project in one client portal

Keep the brief, preview, files, payment, and handoff organized from the start.

CLIENT PORTAL IMAGE

The start of the project should feel clear, premium, and easy to follow.

Used on signed-out account pages to connect the brand to the client workspace experience.
